Your local Swagelok Team & Capital Projects

Comprehensive support during new and existing construction projects to ensure safe reliable products and resources.

Fluid system expertise tailored to your specific project and application challenges. The Capital Projects Support Program from Swagelok North Carolina | East Tennessee is designed to provide architecture, engineering firms, and contractors with comprehensive support during new construction projects and existing facility modifications.

From local product engineering and technical assistance services, dependable small-bore fluid system components and prefabricated subsystems, to coordinated local and Swagelok factory management, all to help you keep your project services on on schedule and on budget.

We understand the needs of challenging applications, what material choices and design considerations are necessary to keep fluid systems operating effectively across industries and environments.

Our local engineers and corporate product design specialists, work alongside you to answer questions and provide tailored application expertise to suit your project needs today and minimize downtime and costly reworks in the future.

We're with you for the Entire Project's Lifecycle

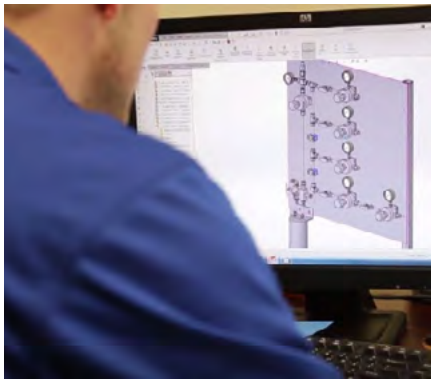
Local Swagelok Support for Capital Projects

APPLICATION AND MATERIALS EXPERTISE

- Solutions that have approvals and certifications for your industry and applications
- Standardizing around effective, available products to streamline operations activities and simplify the design and procurement process
- Tailored product and alloy combination recommendations to maximize corrosion resistance and system longevity in specific applications
- Products engineered to help you meet sustainability goals, featuring leak-tight designs, low emissions certifications, and the reliability necessary for use in high-stakes, critical applications



ENGINEERING AND TECHNICAL DESIGN ASSISTANCE

- Technical support for product and materials selection and application decisions
- Insights as needed on how to more effectively compete, reduce costs, optimize material choices, improve installation, or develop specifications
- Standardized and configurable solutions packages for simple installation including modular assemblies, panels, enclosures, and fully engineered subsystems
- Custom design support and kitting services

PROCUREMENT AND INSTALLATION SUPPORT

- Reliable fluid system products backed by the Swagelok Limited Lifetime Warranty
- Local supply chain planning with regional, national and global inventory access, order fulfillment processes, and logistics network to reliably get you the products you need
- Technical installation training courses and validation services to assist onsite installation procedures
- Onsite inventory fulfillment services during construction for replenishing optimization
